

# IKEM ACADEMY ENERGY & CLIMATE

## About IKEM

IKEM, the Institute for Climate, Energy and Mobility, is a non-profit research institute and recognized NGO by the United Nations. IKEM explores transition pathways to a sustainable future since its founding in 2009. Based in Berlin, IKEM has strong roots in the legal and policy framework that drives the shift to renewable energy in Germany, and with an international, interdisciplinary staff, works to contribute to achieving the energy transition around the world.

## About the Academy

The IKEM Academy brings together researchers, policymakers, private-sector representatives and other stakeholders in the climate sector and society at large, both as speakers and as participants. This year, we look forward to bringing you exciting and innovative content to the comfort of your own home. Our digital academy will explore opportunities and challenges for a global green recovery and include a series of presentations and panels by world-class experts. The three-day programme is packed with knowledge that will give you the tools to advocate for a post-COVID recovery pathway that builds a better future for all.

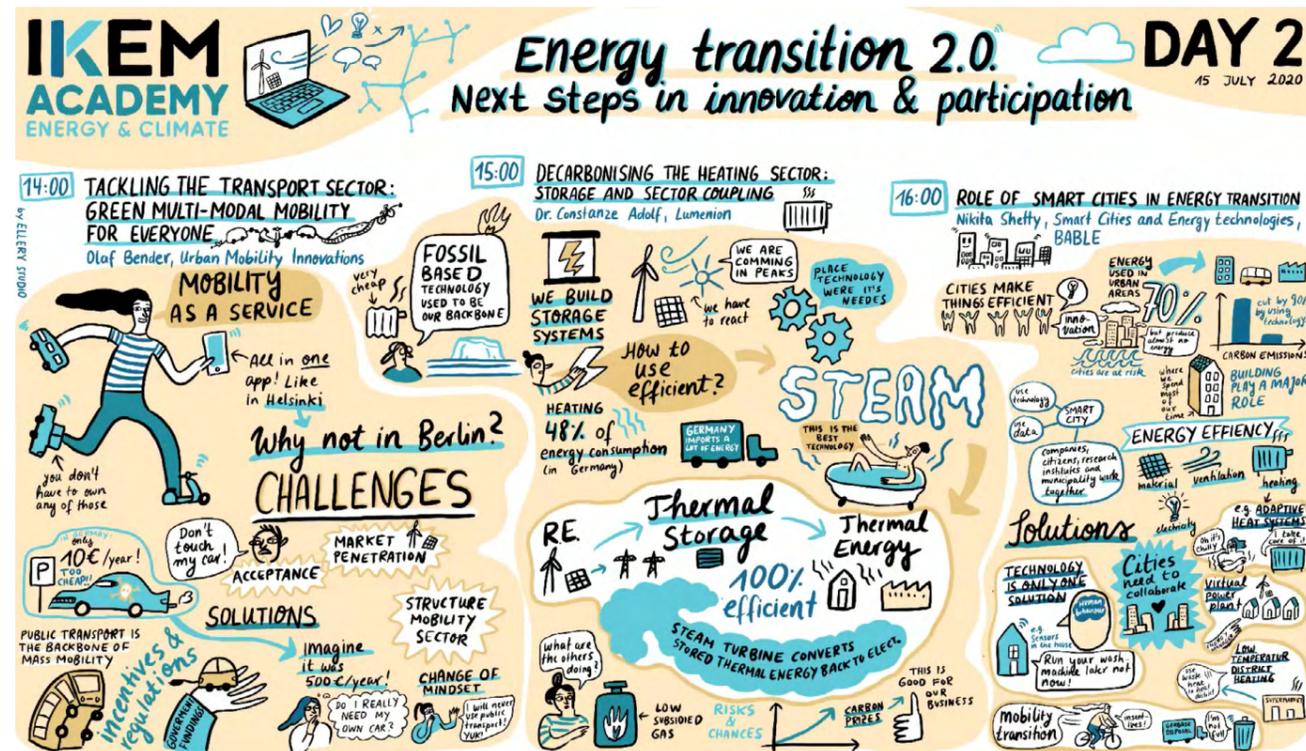

## 2021 PROGRAMME

### Climate change at a crossroads: opportunities and challenges for a global green recovery

After a year of unprecedented crisis, countries around the world are facing immense challenges. Severe weather events and the effects of COVID-19 have upended lives, decimated economies, destabilised markets and inflamed political and social tensions. Recovering from this upheaval demands bold action by the global community. The task ahead, though daunting, presents an opportunity to reimagine the future of our planet and build a more resilient, sustainable and equitable society.

IKEM Academy 2021 will take stock of the current economic landscape and envision a greener future that brings us closer to meeting our climate goals. Engaging seminars led by international experts will explore finance mechanisms, policy measures and technological innovations that can offer new pathways to sustainability for urban centres, rural areas, forests and seas. Join us for this three-day digital event as we create an action plan to power green recovery around the world and ensure a brighter future for all!
